

Lexmark Healthcare – HIMSS Stage 7 Scanning Solution

- ▶ HIMSS Stage 7 requires scanning clinically relevant documentation within 24 hours of creation
- ▶ How are you meeting this goal?
 - ▶ PCs with scanners on mobile carts are expensive and require additional FTE's
 - ▶ HIM Departments do not have the resources to provide concurrent scanning services
- ▶ What if you could scan at the point of care during the clinician's shift?
- ▶ Using the Lexmark Smart MFP, users are able to scan, verify and index documents directly into the medical record or HIM workflow.
- ▶ Capturing clinical documentation at the point of care speeds up the paper to digital process allowing for:
 - ▶ Satisfaction of the HIMSS Stage 7 Scanning requirements
 - ▶ Improves clinical documentation improvement programs
 - ▶ Speeds the record close process for faster revenue cycle
 - ▶ Improves patient safety with all clinical documentation available electronically
 - ▶ Supports concurrent coding and use of computer assisted coding
