Xerox Security Bulletin XRX26-016

PHP2Shell Vulnerabilities (CVE-2026-109618 and CVE-2026-109619)

Published: October 22, 2026

Xerox is aware of the recently disclosed critical vulnerabilities in the PHP runtime, known as “PHP2Shell” and tracked as CVE-2026-109618 and CVE-2026-109619. The PHP project has released fixed versions.

Our Product Security team is reviewing Xerox products, solutions and services to find out whether any use affected versions of PHP and whether these vulnerabilities can be exploited in those products. Where a product is affected, we will prioritize fixes and release them as quickly as possible. We will share mitigations or workarounds sooner where they are available.

INITIAL REVIEW RESULTS

Early results show that the following products and solutions are **not impacted** by CVE-2026-109618 or CVE-2026-109619:

- Xerox® Workplace Suite
- Xerox® Workplace Cloud
- Lexmark Printer Firmware
- Lexmark Cloud Services
- Lexmark Markvision Enterprise
- Lexmark Document Distributor
- Lexmark Print Management
- Lexmark printer drivers

Customers using these products do not need to do anything about these vulnerabilities. Review of the remaining Xerox products and solutions is still underway. We will update this list as products are confirmed as not impacted or affected.
