Lexmark Secure Content Monitor

Secure sensitive information. Stop paper leaks.

You’ve done everything you can to protect your electronic communications from outside threats. But what about inside threats, such as the intentional or accidental release of paper documents—a leak? And when leading research shows that 90 percent of business information is still on paper, chances are good that your sensitive documents are not protected.

Lexmark Secure Content Monitor can help. This solution provides visibility into your paper documents. It prevents security breaches by tracking and auditing your most sensitive data. And it keeps documents secure by setting up proactive alerts to prevent leaks as the paper passes through a Lexmark output device.

Business Challenge

Whether you’re dealing with trade secrets, patented designs or other restricted information, even a small leak can have big consequences for your customers, employees and your business. And it’s easy to see why this is a dilemma:

Tracking confidential paper documents is difficult.

Today, about 4 trillion paper documents are stored by U.S. businesses and government agencies.1 With so much paper floating around, it’s easier for employees to print, copy, scan or fax sensitive documents without being detected.

Investigating information leaks is labor-intensive.

While many companies can track the transaction volumes of their devices, they still spend too much time and money trying to find suspected information leaks—often without success.

Lexmark Secure Content Monitor Advantages

But here’s the good news. Now you can get a complete audit trail of all users and document transactions, thanks to Lexmark’s enterprise monitoring and auditing solution.

It helps you:

Identify potential threats. Prevent paper leaks.

Lexmark Secure Content Monitor provides full-text and attribute search capabilities that are supported in multiple languages. This solution lets you see every document that’s printed, copied, scanned or faxed through an output device. Plus, it lets you set up Discovery Alerts to continuously search all of the content and it notifies authorized users when key words or phrases are found.

Increase compliance. Reduce costs.

With this solution’s comprehensive auditing and account capabilities, you can ensure that you’re in compliance with the latest industry and government regulations. Lexmark Secure Content Monitor reduces the risk of exposing classified information, plus it automates the process of investigating security breaches. So not only does it help put an end to paper leaks, it saves time and money, too.

Stop the leaks. Start the alerts.
Here’s an example of how Lexmark Secure Content Monitor can safeguard your company’s confidential information:

Monitor documents.
As the head of security for a large enterprise, Mike oversees hundreds of thousands of paper and digital documents. With Lexmark Secure Content Monitor, he can easily keep track of the company’s most sensitive data.

Extract content.
Mike can easily search all of the content and metadata in the system. Here’s how it works: The ECM system collects a digital image of the document and performs optical character recognition (OCR). Then, our solution automatically extracts the metadata and content from each job, including user ID, device ID, date, time and other transaction details.

Discover leaks.
Mike can spot information leaks in minutes or seconds—instead of days or weeks—by searching for specific content that’s subject to unauthorized distribution. He can search by device, user, transaction type, location, full text or key word, and receive a complete list of content that matches his criteria.

Secure information.
Mike secures confidential information by setting up Discovery Alerts that will automatically warn him of any potential leaks as soon as key words or phrases are found. He also has single-click access to all of the digital document images and metadata for efficient retrieval.
