

Extend the value of your ERP

Despite investing in technology and solutions to handle financial processes more efficiently, critical accounting and finance activities at many organizations are still slowed down by manual tasks.

At the same time, finance and accounting managers are being asked to handle processes faster, provide more accurate and usable data to business users and reduce costs. The question isn't how to set priorities: Meeting all these objectives is essential for any organization to remain competitive for the long term. The real issue is finding ways to do them better.

You've already got the foundation

Good news: The problem is not your ERP. It was designed to record, manage and protect enterprise financial data through precisely defined roles for usage. And it does that very well.

What it doesn't do well is let you capture, manage or access any of the unstructured information that clarifies and supports recorded transactions for receivables and payables. Nor does it make it easy to provide up-to-date information about those transactions to people who need it to do their jobs.

To stop chasing key information and patching together reports for business units, you need technology that works with your ERP to put all the information and processes it doesn't control into context with the transaction data it does contain. You need financial process automation from Lexmark.

"With Lexmark, we've gained operational efficiency across the board because we don't have people spending time on non-value-added tasks like searching for paper. All our documents are online and tied directly to our customer transactions in Oracle."

Mike Clayback

IT Director

Sealing Devices, Inc.

Build on your ERP investment

Lexmark financial process automation solutions work with the technology you already have—even multiple ERPs—so your IT strategy remains intact. It's true, deep integration that smoothly connects processes and documents with transactions in your ERP. So you eliminate error-prone, time-consuming manual tasks that often take place behind the scenes, and start working with your ERP instead of around it.

Automate any size operation

Lexmark offers financial process automation solutions to fit nearly any operation. Whether you're processing thousands, hundreds of thousands or even millions of transactions on a monthly basis, we can tailor the functionality and scope to fit your needs. It's a practical approach to automation that recognizes the delicate balance between business requirements and the need for a healthy return on investment. We can help you chart a technology path to fit current needs of your organization that can be easily adapted as requirements change.

Automate any financial process

Purchase-to-pay, order-to-cash and everything in between—we've got them all covered. Our technology portfolio covers a wide range as well, with capture, document management, process management and enterprise search technologies. Deployment options are tailored to meet your organization's needs, and include on-premise, subscription, cloud and hybrid cloud.

A complete technology line-up for complete automation

Capture

Collect documents and data from any source: paper, fax, email attachments, XML and PDF. After capture, relevant data is validated and transferred to your enterprise systems, content can be securely stored in the Perceptive Content repository and documents are easily accessible throughout the financial process workflow.

Content

Built on a fast, scalable, world-class storage model, our portfolio of content management solutions includes a range of functionality to cover every aspect of financial processes, including electronic signatures, records and information management, and document composition. Lexmark (Perceptive Software) has been positioned by Gartner, Inc. in the Leader's Quadrant for enterprise content management (ECM) solutions, 2014.

Process

Adaptable, user-friendly workflow enhances flexibility yet provides a structured means to ensure business process integrity. For transactional processes within ERPs, we offer both SAP- and Oracle-Certified workflow solutions.

Search

Unlock valuable content regardless of where it exists—repositories, SharePoint sites, email systems, network shares, intranets, extranets, websites, databases and social media. Lexmark (Perceptive Software) has been positioned by Gartner, Inc. in the Leader's Quadrant for search solutions, 2014.

Integration

Seamless, intuitive and efficient integration capabilities let you capture, manage, access and process invoices, sales orders, vendor communications and any other information related to your financial processes more effectively across your entire IT environment.

Lexmark extends the value of financial processes throughout the enterprise

Increase visibility for more informed financial decisions

Improve transparency by giving business units access to current data in a usable format, so they can more effectively manage working capital and fulfill strategic objectives.

Unify processes and information

Standardize data extraction, ensure the integrity of business rules, reduce exceptions and eliminate workarounds, so there is one version of "the truth" and only one place to get it.

Unlock information trapped in unstructured content

Extract data efficiently across multiple channels and formats, then validate and pass it through to your ERP for near real-time evaluation of key indicators.

Boost the functionality of existing systems

Integrate smoothly with existing ERPs to minimize disruption, speed optimization and increase adoption.
